Most and Least Observed – The following tables list the top 20 most and least observed species in Maryland during 2011 according to the percentage of checklists on which they appear. * denotes pelagic species falling in Maryland according to the 'closest land rule'. Disregarding these, Northern Goshawk, Swallow-tailed Kite, Pomarine Jaeger, and Long-eared Owl would make the list.

Species Frequency Changes – The following tables show species frequency data in Maryland and changes in frequency between 2010 and 2011 as defined by percentage of ebird checklists. The tables show checklist percentages for three time periods; the five-year average of 2005-2009, 2010, and 2011. The sample size (# of complete checklists) is also listed for each time period. The final column represents the percentage difference in checklist frequency from 2010 to 2011. The first two tables show the largest increases and decreases in checklist frequency (top 40). These tables are limited to species that appear in at least 1% of ebird checklists. **Please note** – Care should be taken not to necessarily assign increases or decreases to changes in a species population. A shift in the pattern of eBird reporting (habitat, season, chasing) will also affect checklist frequencies.

Checklist percentage for all preceding tables is somewhat controlled for seasonal differences in checklist numbers by equally weighting the % in all of ebird's 48 time points. This might not be the best method, but it's the easiest.
