Species Frequency Changes – The following tables show species frequency data in Maryland and changes in frequency between 2011 and 2012 as defined by percentage of ebird checklists. The tables show checklist percentages for four time periods; the five-year average of 2005-2009, 2010, 2011 and 2012. The sample size (# of complete checklists) is also listed for each time period. The final column represents the percentage difference in checklist frequency from 2011 to 2012. The first two tables show the largest increases and decreases in checklist frequency (top 40). These tables are limited to species that appear in at least 0.5% of ebird checklists. **Please note** – Care should be taken not to necessarily assign increases or decreases to changes in a species population. A shift in the pattern of eBird reporting (habitat, season, chasing) will also affect checklist frequencies.
